

Meet the new Helmsman RTC15 steering control

“Take command with confidence”

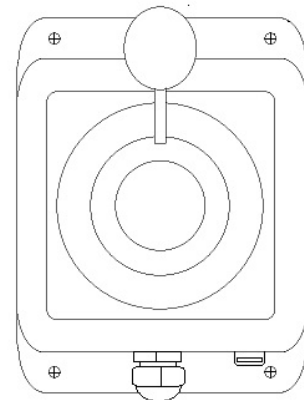

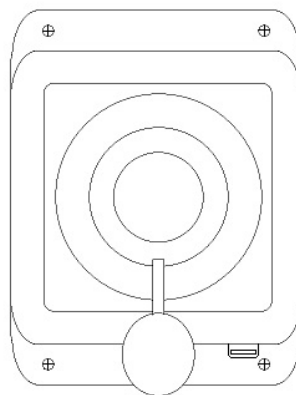

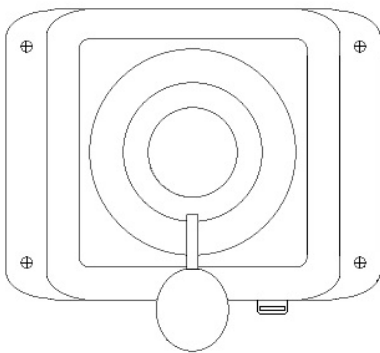

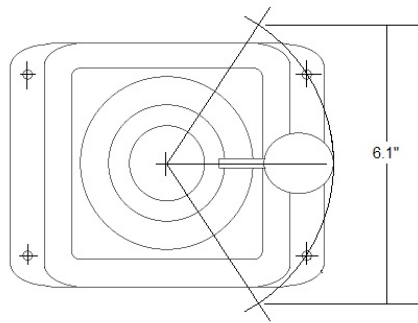

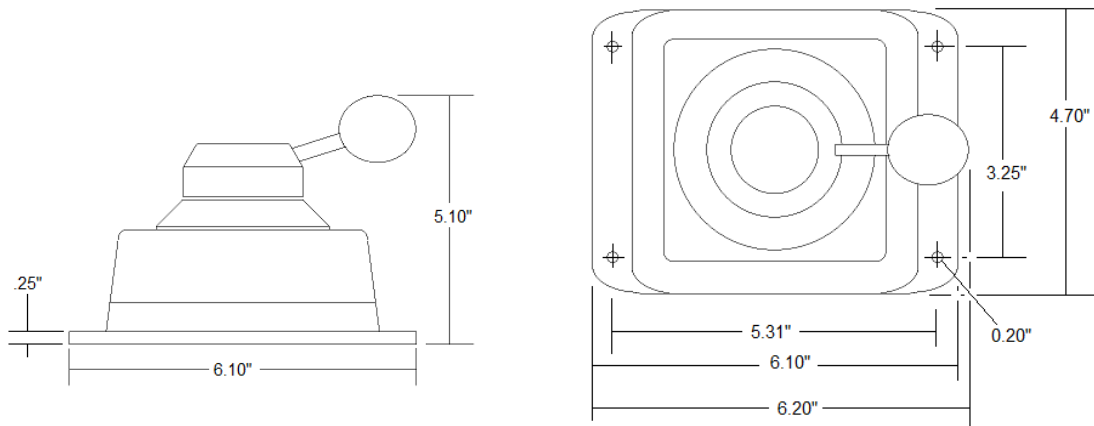

Helmsman's heavy-duty autopilot steering controls have established a reputation for quality and reliability in the Alaska king-crab and long-line fisheries. Helmsman controls are now being used on commercial fishing boats from New Bedford to Dutch Harbor. The new Helmsman RTC15 gives you, as a Comnav dealer, a profitable alternative to the standard product offering and gives your customer an edge by improving reliability and vessel control.

The Helmsman RTC15 is simple to install having an external mounting flange. This flange can be rotated 90 degrees to accommodate tight quarters. Two handle styles are available. The handle can be installed facing up or down and its action is reversible as well. The RTC15 connects to the popular Comnav 1001, 2001, 1101, and 1201 autopilots.

Specify Helmsman full follow-up controls for your customer. Better performance, improved reliability, increased customer satisfaction, and better sales margins.
